## The Problem We Solve

Unlike traditional construction where building a house takes months, modular construction needs to be fast.

The first question isn't how much can we save?

The big question is "*How much quicker is it?*"

It's all about building faster, without it costing more or sacrificing quality.

## The Only Splashback Designed For Modular Construction

Innovative Splashbacks are the only splashback designed specifically for the modular construction industry.

We understand the unique needs of the industry, and how important it is to have products which reduce build times without reducing quality.

Here are some of the benefits we bring to modular builders.

### Fast Installation

Unlike traditional construction, speed is vitally important for modular construction.

Innovative Splashbacks are cut to size, ready to install. They can even be cut to fit around joinery items such as windows, and can include GPOs and tap-holes.

They are half the weight of glass, 25 times stronger and very easy to handle. A shower panel for example could be installed by 2 people in under 15 minutes.

And they can be installed by any trade on-site (they are often

installed by DIY renovators) so there's no need to bring in, schedule or manage outside trades.

We cut your panels to any size you need.

Our maximum panel size to work with is 2030mm x 3050mm.

And if extra cutting/trimming is required on-site, it can be done very easily with standard woodworking tools.

## Total Design Freedom

Innovative Splashbacks are available in any colour from any paint range such as Dulux, Taubmans, Wattyl or a swatch colour. We even match Laminex and Pantone colours.

This includes solid colours, metallic finishes and pearlescent finishes.

They are also available as high definition prints in any image, graphic or pattern of your choice. This can also be used to replicate the look of marble, stone or tiles.

Innovative Splashbacks are painted on the rear, like glass. This gives them a depth of colour and a high class finish.

It also protects the paint or image because it's not on the front.

## Short Lead Times

Innovative Splashbacks have pioneered a production process which allows us to produce bespoke, custom orders quickly.

We produce, quality check and pack large custom orders of different sized panels of 100sqm in as little as 6 working days from start to finish.

Smaller orders are flat-packed, and larger orders are palletised. And naturally, you can choose your own packing method if you have specific needs.

And with palletised orders, your order can be packed in any order you need, so the panels you need first are on the top of the pallet.

With our customisable delivery schedule, you will have exactly what you need, exactly when you need it, including orders split into multiple deliveries.

Every delivery can be packed to suit your production schedule, with the panels you need first on top of the pallet. And all pallets are delivered with a packing list so you know exactly where every panel is.

This allows us to be respond quickly to the needs of our customers, and keep your project flowing.

## Simple To Clean

### *Hygienic, grout-free surface*

Innovative Splashbacks are a hygienic surface which makes them popular, particularly in medical facilities. There is no grout which can discolour or attract dirt and mould.

They are cleaned with a simple wipe over with warm soapy water and a soft cloth or chamois.

And there's no need to use harsh chemicals because unlike tiles or glass, soap doesn't build up on the surface.

## Zero Waste And Sustainable

Because Innovative Splashbacks are cut-to-size, there is no waste to

deal with.

All our offcuts are used for other projects, or recycled in Australia and turned back into raw acrylic pellets to be used in other products.

## Nationwide Delivery

Every order is delivered from our factory in Geelong.

All orders are packed securely, are picked up daily, and are delivered across Australia using the TNT/Fedex Network. They are all tracked by us to make sure there are no delays.

## Supporting Australian Jobs

We are proudly certified Australian Made and carry the official green and gold kangaroo.

We are an Australian family owned and run business who supports Australian jobs, and produce all our products in right here in our factory in regional Victoria.

## PreFabAus Members

Innovative Splashbacks are members of PreFabAus, regularly attend events to promote the industry and encourage others to do the same.

# Introducing Innovative Splashbacks

Innovative Splashbacks are an Australian, family business, producing acrylic splashbacks from our factory in Geelong since 2012.

We have been chosen to supply splashbacks for projects ranging from small DIY renovations up to major hospitals, aged care centres and modular projects. Our acrylic splashbacks are regularly specified for projects across Australia by architects and designers.

As the modular construction industry grew, we created an offering which is ideal for the industry.

We also produce high definition digitally printed splashbacks entirely in-house, allowing clients to choose their own image or to replicate the look of glass, stone or tiles without the cost or weight.

Innovative Splashbacks are proudly certified Australian Made and carry the official green and gold kangaroo.

We are also committed to the future of modular construction, and are members of PreFabAus.

## Services

- PAINTED ACRYLIC SPLASHBACKS
- PRINTED ACRYLIC SPLASHBACKS
- IN-HOUSE GRAPHIC DESIGN
- CUSTOM PAINT COLOURS
- NATIONWIDE DELIVERY

## Painted Acrylic Splashbacks

Painted acrylic splashbacks from Innovative Splashbacks are a 6mm thick high quality acrylic which are painted on the rear.

This is the same way glass splashbacks are painted, and gives them depth which enhances their appearance.

It also protects the paint from being scratched.

They are ideal for modular construction projects compared to glass, tiles or aluminium composite panels.

### ***Why Acrylic Splashbacks Over Tiles?***

Painted acrylic splashbacks have significant benefits over tiles.

They are very quick to install, typically taking 15 minutes for a large panel, and less for a smaller panel.

This is very fast compared to tiles which can take hours and includes cutting tiles, setting each one and grouting.

Acrylic splashbacks are very robust for transport and won't fall off walls.

They are hygienic, sanitary and easy to clean.

No special trade is required to install acrylic splashbacks, and this means no need to hire or manage external trades.

Longer term, because acrylic splashbacks are one full panel, there is no grout. Grout will discolour over time, so it needs replacing and can be unhygienic.

If an individual tile is damaged and needs to be replaced, it looks different, giving the kitchen or shower a 'dated' look quickly. Acrylic splashbacks on the other hand look brand new years after installation.

And ultimately acrylic splashbacks offer a high class finish compared tiles, being a rear painted grout free splashback.

### ***Why Acrylic Splashbacks Over Aluminium Composite Panel?***

One mistake is assuming aluminium composite panels are heat-resistant and ideal for behind cooktops.

Like acrylic, composite panels should not be used within 50mm of an electric or induction cooktop.

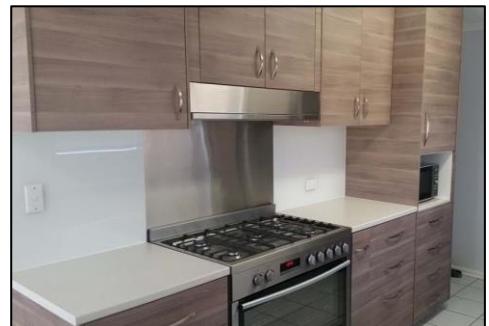

It is produced as a veneer of aluminium over a polyethylene core. As a result, like acrylic (which is also a polyethylene) it can melt and warp if it is too close to a heat source for too long.

Ignition and melting are not the same.

To address this issue, we offer a stainless steel insert which is bonded to cement sheet with a fire-resistant silicone. This solution is completely resistant to heat and ignition, and is common in major commercial kitchens.

Additionally, because composite panels are painted on the face, they lack the visual depth and quality appearance of rear painted acrylic splashbacks.

And in the event of damage, the paint or print on the front will be damaged and is not repairable.

**Stainless Steel Inserts**

Painted acrylic splashbacks also have significant benefits over glass splashbacks.

They are half the weight, so require less labour to install. One person can install a kitchen splashback compared to two for glass.

This also means less chance of damage during installation.

The price of glass is also significantly higher.

Acrylic splashbacks are also easier to handle, so far less prone to damage.

They are also easier to clean, do not allow the residue from soap to build up and will air dry and shine on their own.

And the nature of acrylic means it has a natural flexibility which means there's no risk of them shattering during their lifetime.

Unlike glass which cannot be cut once toughened, acrylic splashbacks can be cut on-site if necessary. It also gives you the option of purchasing full sheets instead of cut-to-size panels, and cut them yourself.

This may be preferable for your build process.

It also means you can cut GPOs and tap-holes, or make minor adjustments if you need.

# Printed Acrylic Splashbacks

*Any high resolution image, graphic or pattern*

Like painted splashbacks, our printed acrylic splashbacks are printed on the rear to give them depth and a high class finish.

Innovative Splashbacks produce our acrylic splashbacks entirely in-house, and are the only acrylic splashback supplier in Australia to do so.

All our splashbacks are printed on a Canon Arizona 1280XT, a flat-bed, digital UV printer.

It is capable of printing panels up to 2030mm x 3050mm, in any thickness up to 50mm.

One of our staff members is Tracy who is a qualified interior designer and graphic designer.

Tracy makes sure all images meet our strict resolution requirements, approves artwork with our clients and can perform graphic design work.

# Who Uses Innovative Splashbacks?

Innovative Splashbacks have been supplied to projects all over the country, ranging from small DIY renovations up to multi-million dollar residential and commercial developments.

Some of these projects include:

- **QBuild Social Housing** - Ausco
- **Modular Housing** – Modular WA
- **Mining Accommodation, Northern Territory** – Warle Construction
- **Modular residence** – Goldbeer
- **Joint Housing Project** – Modularity, University of Melbourne, Sustainability Vic
- **Haven Community Care** – Belsar Developments & Magellan Projects
- **ANU Childcare** – EPB Modular Construction
- **Private modular residence** – Echidna Built
- **Social housing** - Aboriginal Housing Victoria
- **Wantirna Aged Care** - Specified by Silver Thomas Hanley (Melbourne)
- **Joondalup Health Campus** - Specified by Silver Thomas Hanley (Perth)
- **Wyndham Medical & Business Complex** - specified by Baade Harbour
- **ECU Sciences Building** – specified by Silver Thomas Hanley (Perth)
- **Penshurst Hospital Redevelopment** - specified by PM Design
- **Cranbourne Community Hospital** - Specified by Billard Leece
- **Epworth Level 2 ICU** - specified by Team 2 Architecture
- **St. John of God Langmore** - specified by Silver Thomas Hanley (Melbourne)
- **Royal Melbourne Hospital (Cardiology upgrade)** - specified by Clarke Hopkins Clarke
- **Hollywood Hospital (WA)** - specified by Silver Thomas Hanley (Perth)
- **Monash University Science Labs** - specified by Hayball
- **Birchip Hospital Redevelopment** - specified by Baldasso Cortese
- **Barwon Health ED Pediatric Unit** - specified by Silver Thomas Hanley (Melbourne)
- **Dariole VC North Dandenong Medical Centre** - specified by Pulse Architecture
- **Austin Health Angiography Interventional Health** - specified by Clarke Hopkins Clarke
- **Hollywood Hospital** - specified by Silver Thomas Hanley (Perth)

# Your Next step

Please let us know what you need next.

You can contact us and request:

- ✓ A sample/technical folder
- ✓ Samples of specific colours
- ✓ Commercial pricing
- ✓ A quote for a specific project.

If you have any questions, feel free to contact us as well.
